

Seedhunt

2023 list

This seedlist is divided into four sections--seed of **California native plants, Salvias, Other Seeds, Restios**. Seeds offered have, in most cases, been collected from plants grown at my garden in Watsonville, California; some offerings are contributions from friends.

Payment for orders can be made with **PayPal** or by personal check made out to Seedhunt. The link for Paypal is on the Order page of the website, or pay to seedhunt@cruzio.com. A Paypal invoice can be sent to your email address and payment can be made online with a credit card, even if you don't have a Paypal account.

This list, as well as pictures of many of these plants, can always be found online at **seedhunt.com**. Email inquiries can be sent to **seedhunt@cruzio.com**. There are periodic updates on seeds out of stock to the website listing.

Packets from this list are \$4.00 each. Zones stated correspond to USDA climate zones. Packet size is at least **50 seeds**, unless otherwise specified.

California Native Plants

Achyrachaena mollis - Blow wives. The very subtle flowers of this annual composite open golden yellow, then turn to red as they mature. The prominent spherical 1.5" clusters of shining silvery white bracts provide the real show, and they last quite a while. A grassland inhabitant.

Agoseris grandiflora – Giant mountain dandelion. Just a dandelion, but with truly grand fluffy seedheads over 2" wide. Lemon yellow flowers over deeply lobed leaves on a basal rosette. Perennial. Should be very tough. To 12" tall.

Allium dichlamydeum – Coast onion makes 8-10" stems tipped by clusters of vivid rose pink flowers. 30 seeds

Allium falcifolium – Low very ornamental onion has gray-green falcate leaves and round heads of vivid rose purple flowers in spring. Great in containers and rock gardens. 30 seeds Z8

Amsinckia tessellata [var. gloriosa] – Vivid orange flowers emerge from coiled spikes on robust (to 2') plants. Original collection from slopes in interior San Luis Obispo County and they painted the hills orange. Annual.

Aristolochia californica – A lovely California relic of a mainly tropical genus, this vine has large felted, heart shaped leaves and curious purple-brown flowers reminiscent of a meerschaum pipe. Not difficult to grow, provided it is given rich soil from the start and never, ever allowed to become potbound. Best results when seeds soaked overnight, then covered at least 1/4" or the cotyledons will not be able to break out of the seedcoat. From Matt Teel. 30 seeds

Asclepias speciosa - Wide gray to gray-green leaves on stems to 4' tipped by large rounded heads of pinkish white flowers. Spreads at the root. This great perennial is slow to develop in its first year, and broadcast sowing is not recommended. Larval food for monarch butterflies. Z2 50 seeds

Brodiaea californica - Native bulb makes strong stems to 18"+ with a long display of showy upfacing umbels of dark lavender purple flowers in late spring and early summer. Z8 30 seeds

Calandrinia breweri – Low spreading annual with thick green leaves and many rounded rosy pink flowers in spring.

Calystegia malacophylla – Soft grey leaves in spreading mats on this ground covering perennial morning glory. Soft yellow flowers in spring. 20 seeds

Caulanthus anceps (Guillenia lemmonii) - Individual flowers are lavender pink and sweetly fragrant, set along long, wand like gray stems. Fairly subtle on its own, but sparkling in combination with other flowers, or in a mass.

Caulanthus flavescens (Guillenia f.) - Erect thin spikes carry masses of small bright, creamy yellow flowers in spring and early summer on this slender annual. Very showy when grown in a small colony. Stems to 18-24".

Caulanthus inflatus - Spectacular annual with striking inflated yellow stems; terminal tip and buds are dark purple. Small petals are bicolored purple and white and stigmas are bright pink. Needs good drainage, and grows well in containers. Can grow to 2'. There is nothing quite like this plant, commonly known as desert candle, when it blooms.

Centaureum species – see *Zeltnera*

Chaenactis artemisiifolia – Ferny, finely dissected gray leaves are set against well branched purplish stems that can reach 5' in a season; dense white heads of "pincushion" flowers are abundant. Annual.

Chorizanthe douglasii – Heads of hot rose pink flowers on slender stems are held over low leaves in late spring on this buckwheat relative. Best in lean soils, found in grassland or open woodland. Annual.

Chorizanthe membranacea - In natural settings, this annual is rather understated, with half-inch round heads of pinkish white flowers on erect stems. Planted closer together or in containers, it can present an impressive display of densely interlaced stems carrying pinkish white round flower heads in late spring and summer.

Chorizanthe staticoides- Turkish rugging. Abundant on dry slopes, this annual puts on its show in late spring or early summer. Branched stems make broad heads of bright purplish magenta, prickly flowers.

Chorizanthe ventricosa – Flat prickly mats of rose flowers on bare soil are vivid in late spring. Original collection from interior ranges near Parkfield Grade.

Cirsium occidentale – Coastal form of cobweb thistle makes rounded gray mounds to 2-3'; densely cobwebby heads open with red flowers. Described as biennial, but acts annual. Bees adore the flowers, birds love the seeds and hummingbirds visit flowers too. 30 seeds

Clarkias are beautiful hardy annuals; they have been hybridized and bred for larger and more double flowers, but some of the species and varieties are the best. These species have been separated in the garden by space and time of bloom, so seed should be true to name. Packets contain 100+ seeds.

Clarkia amoena ssp. whitneyi - Large light lavender pink flowers with paler zone near the base of the petals are quite showy on this distinctive form of a species of restricted habitat.

Clarkia biloba – Two lobed clarkia grows to 2-3', with slender, flexible stems carrying many soft rose pink flowers with two-lobed petals. Original seed from the Sierra foothills.

Clarkia breweri -- Small in stature (5-10") and somewhat particular in its cultural requirements, fairy fans clarkia produces delightfully fragrant good sized pink flowers in late spring. Needs good drainage, best in part shade. 30 seeds

Clarkia gracilis ssp. tracyi – Slender stems carry an abundance of showy flowers in spring and early summer. Lilac pink petals have a broad white zone, with a red base that rings the flower center. Best with good drainage.

Clarkia modesta – Delicate clarkia sets smallish pale pink flowers against red stems and green leaves and is covered with flowers in late spring and early summer. Prefers shady places in woodland settings.

Clarkia prostrata – Species from coastal central California makes low, spreading mats dotted with four-petaled light pink flowers with whitish centers and a darker pink splotch on each petal.

Clarkia purpurea ssp. purpurea - This form of the species is very distinctive, with dense, terminal heads of fair sized dark lavender flowers set against blue-green leaves. Upright to 18-24".

Clarkia purpurea ssp. quadrivulnera – This species is widespread and variable. This form has shiny deep reddish purple flowers with an unusual white center. Stems can reach 3-5' in a garden setting and carry many flowers.

Clarkia purpurea ssp. quadrivulnera—white flower - Erect willowy annual displays small white flowers along the stems in spring. Leaves are soft grey and fuzzy. From a population in Monterey County.

Clarkia rubicunda - Large lavender pink flowers have red centers on this showy annual. Floriferous and very striking in containers or the garden. Good cut flower. Can grow to 2'+, blooms for months.

Clarkia speciosa ssp. immaculata - Silky mauve purple flowers with striking white centers are 1.5" across in this subspecies. *Can only be shipped within California.*

Clarkia speciosa ssp. speciosa - Shiny red purple flowers with close-to-orange centers shimmer in late spring and early summer. Best in well drained sites.

Clarkia tenella – lavender or maroon flowers – listed under Other Seeds. From South America.

Clarkia unguiculata 'Laguna' - From a colony found in Santa Cruz County, this very distinctive seed strain makes stocky columnar plants to 18". Bright mauve-red flowers and leaves are densely held. Formerly "compact form".

Clarkia williamsonii - Gaudy lavender pink flowers are good sized, with a broad white central zone, and wedge shaped patches of dark red violet on the petals. Best results with reasonable drainage.

Claytonia [gypsophiloides] – Unsure of the species naming or whether it has "intergraded" with another *Claytonia*, but very sure about the charm of this easy annual. Palest pink flowers, red buds. Colorful as it dries.

Claytonia parviflora – Smaller form of miner's lettuce forms tight mounds with white flowers nestled in the typical cupped leaves. Whole plant turns peachy gray as it matures. Tight buns to 6".

Claytonia parviflora ssp. viridis – Diminutive annual makes tight buns of pale green narrow leaves, then produces many pinkish white flowers till the soil dries out. Great container plant.

Collinsia bartsiiifolia var. davidsonii – Smaller scale collinsia has many pink and white flowers on stems to 12". Great container plant or in small scale plantings.

Collinsia heterophylla—**Sierra form** -- Plants from the Sierras of this species have dark purple flowers, with light central patch and red lines in the usual places. Striking annual for part shade.

Collinsia multicolor – Central California annual has loosely whorled flowers with whitish upper petals and lavender lower lip. Smaller scale than *C. heterophylla*. Very floriferous.

Collinsia parviflora - Roundish bright dark green leaves make 4-6" dense cushiony mounds which sparkle with vivid small violet blue flowers. Great annual for small scale plantings or containers.

Collinsia tinctoria – Tincture plant is an annual that can grow to 2' high. Abundant flowers in "Chinese houses" tiers are creamy white, with purple lines that seem almost painted on. Easy to grow.

Collomia grandiflora - Erect annual to 3' with shiny green leaves and very broad dense terminal heads of beige to salmon pink starry flowers. A very unusual color in flowers.

Coreopsis (Leptosyne) calliopsidea – Sheets of these vivid golden yellow daisies brighten interior valleys when conditions are favorable in spring. This easy annual can have individual flowers up to an inch across. 30+ seeds

Daucus pusillus – Wild carrot or rattlesnake weed. Found in many plant communities throughout California, this easy annual grows 4-20" high with lacy leaves and umbels of greenish white flowers. Larval food for swallowtails.

Deinandra (Hemizonia) corymbosa - Coastal tarweed. Cheery 1" yellow daisies appear all summer on this well branched coastal annual to 18" with aromatic foliage and an easy constitution.

Deinandra (Hemizonia) fasciculata – Clouds of acid yellow daisy flowers are held in dense heads on wiry stems on this well branched, airy annual. Plants can reach 3' in height. Extended bloom season.

Delphinium hesperium pallescens – Probable name for this sturdy, beautiful delphinium from dry slopes in the southern interior coast ranges. Stems 2-3' high have many pinkish white flowers in spring and early summer. Let dry after bloom.

Delphinium parryi – Beautiful blue delphinium grows to about 18" and blooms in spring. Can flower in its first year, then will go dry (like a bulb) through summer.

Dichelostemma capitatum - **giant form** - Tight heads of lavender blue flowers on this form of blue dicks from Santa Cruz Island; original collection by Roger Raiche. Stems can reach to 3', and fl. heads are easily 3" across. 50 seeds

Diplacus (Mimulus) aurantiacus – Sticky monkeyflower can grow to 5' or more high, with bright golden orange flowers along the stems in late spring and early summer. Can take drought or moderate watering. Hummingbirds love it.

Diplacus grandiflorus (Mimulus bifidus, Mimulus aurantiacus var. grandiflorus)– Shrubby monkeyflower has large, somewhat frilly peachy salmon flowers. From the inland mountain ranges of northern California.

Diplacus (Mimulus) pictus - The beauty of this small annual is in the intricate markings on its striking flowers. The background color is white, but it is delicately patterned with clear brown lines. Best in containers. 100+ seeds

Dudleya brittonii – Baja California. Huge succulent silvery rosettes put up flower spikes with pale yellow flowers in spring, but the ghostly rosette is the real show. Protect from hard frost and winter wet. 100 seeds

Elymus californicus – California bottlebrush grass has wide green leaves and gracefully draping "bottlebrush" flower spikes on 4-5' stems. Found in moist conifer forests, it appreciates at least part shade. Z8 or less

Epilobium brachycarpum -- Autumn willowweed is sometimes called a weed, but what a nice weed. Quarter-size mauve flowers are abundant in late summer with just a little supplemental water. Looks like a *Clarkia* when it flowers.

Eremalche parryi - Trailing stems carry many bright silky light rose purple flowers in spring on this uncommon, pretty annual. Flower form like that of many Clarkias, and quite showy in bloom.

Eriogonum elongatum -- The common name longstem buckwheat barely describes the charm of this plant. Round clusters of pinkish white flowers are carried along willowy ghostly gray stems that extend 2-3' from the plant base. Z8 at least

Eriogonum fasciculatum – Shrubby buckwheat covers vast hillsides in the interior part of this state. All manner of insects revel in the warm white to pale pink flowers in early summer, rusty red seedheads follow. Z8 at least

Eriogonum giganteum – This grand (4-7') shrub with large oval silver leaves covers itself in summer with broad lacy umbels of white flowers that age rusty. Attractive to beneficial insects. Z9

Eriogonum grande var. rubescens - dark flower - This seed strain of red buckwheat produces rose pink to rose-red flowers. Low leaves are gray to greenish gray. Flower color is variable, but never light pink. Some flower stems are taller than the typical seed strains offered of this species. Z9

Eriogonum nudum – robust form – Local race of naked buckwheat is 5' or more high when in bloom. The typical white to pinkish ball flowers are abundant along the erect green to rosy leafless stems in summer and early fall. Perennial.

Eriogonum vimineum– Wicker buckwheat. Perfect 18" domes with vivid rose pink round flowers held along wiry interlaced stems brighten the summer and early fall garden. Showy, annual.

Erysimum capitatum – Annual or biennial brightens hillsides with spikes of fragrant, pale to bright yellow "wallflowers" in spring. Parent seed from inland San Luis Obispo County population.

Erysimum franciscanum - Subshrub with narrow green leaves puts up stems of fragrant bright yellow flowers as long as water is plentiful. Original seed from coastal bluffs in Santa Cruz County. 30 seeds

Erythranthe (Mimulus) guttata -low form - This desirable seed strain of the perennial common monkeyflower produces leaves that stay low, and fairly tidy. Brilliant yellow fls. on close to leafless 18" stems. Wet growing. Z6 100+ seeds

Eschscholzia caespitosa – Foothill poppy is somewhat smaller than typical California poppy. Bright orange flowers are abundant in spring and early summer. Annual. 100 seeds

Eschscholzia californica - cream fl. - Perennial form of California poppy has creamy to palest yellow flowers; it is smaller in stature than many robust orange cultivars, fitting into mixed plantings easily. 100 seeds

Eschscholzia lemmonii ssp. lemmonii – Incredibly vivid orange flowers from furred buds appear through the spring on this typically grassland inhabitant. Not as overwhelming in character (seeding around) as full size California poppy.

Eschscholzia lobbii – Frying pans. Diminutive poppy plants produce vibrant clear yellow round flowers in spring and summer. Great for containers or rock gardens. Annual. 100 seeds

Eschscholzia lobbii 'Sundew' – Creamy pale yellow poppy flowers are a little larger than the species. Easy to grow and quite floriferous. 50 seeds

Eucrypta chrysanthemifolia - Divided mounding foliage has a wafting sweet-lemony smell; small white flowers are carried in loose clusters in spring, early summer. Annual, and worth it for the foliage scent alone.

Festuca californica –green --Rich green leaf blades on 18" full clumps, this handsome grass is well adapted to summer dry climates when grown in shade. It inhabits north facing, often shady slopes Airy flower stems to 4'+. Z8 or less

Gilia achilleifolia – bright blue. More relaxed in leaf and flower than *G. capitata*, this easy annual carries cheery bright blue rounded flower heads in spring and early summer. 100+ seeds

Gilia achilleifolia—pale blue – Selected color form of California gilia has pale grey-blue flowers. 100+ seeds

Gilia achilleifolia—white -- White flowered form of this cheery annual—easy and prolific in bloom. Reseeds nicely. 100+ seeds

Gilia achilleifolia –mix Seed included from all the colors. 100+ seeds

Gilia capitata ssp chamissonis – Received under this name, though plants lack the skunk odor. Finely divided leaves form tight, low cushions; round heads of lavender blue flowers are held in abundance just over the low leaves.

Gilia nevini –Small starry blue flowers appear for months in abundance among feathery leaves on this charming annual. Mounds to 12". 200+ seeds

Grindelia camporum— Great Valley gumplant makes showy bright yellow daisy-style flowers on 1-2' stems in spring and summer. Big buds are ornamental and quite deserving of the “gumplant” label.

Grindelia hirsutula – Free flowering gum plant has 3" yellow daisy flowers that appear for months with some supplemental watering. Rough green leaves are not gummy. Flower stems to 30".

Grindelia stricta – Upright shrub to 3' has sweetly aromatic, slightly sticky wide green leaves. Yellow daisy flowers to 2" across are abundant in summer. From moist coastal habitat, needs moderate water.

Helenium puberulum – **maroon**. In this form, the round balls of buds are maroon. As the fertile flowers open with yellow stamens, the circling of open flowers provides great contrast. Very easy, can reseed. Z8 100 seeds

Hemizonia congesta ssp. luzulifolia - Bright white daisies on this annual tarweed appear in summer and early fall. Aromatic leaves perfume hot summer days. 50+ seeds

Hemizonia corymbosa, *H. fasciculata* are now listed under *Deinandra*.

Heuchera maxima –Large rounded leaves develop into low wide cushions; spikes of warm white flowers set on pinkish stems rise to 3' in spring. Great in dry shade. 100+ seeds

Horkelia californica – The aroma from the leaves of this unassuming, low mounding perennial perfumes the garden all through the warmer months. Starry white flowers in spring and early summer can be visited by butterflies.

Hulsea heterochroma – Very narrow rusty red rays surround a central golden disc; glandular green leaves stay low. Can grow to 3' high. "Super Smoke Plus" will accompany seed, as it is a fire follower.

Isomeris (Peritoma) arborea – Silvery light green leaves add beautiful foliage texture to any planting. Bright yellow flowers followed by fat green seedpods (hence its common name of bladderpod). Shrub to 4-5'. Z9? 30 seeds

Lasthenia californica ssp. macrantha – Hard to believe this perennial goldfields is closely related to the slender yellow daisy that carpets dry places in spring. Wide green leaves form a tight cushion to 4" high and 16" across. Bright yellow flowers appear almost year-round. From the immediate coast, best with some summer water.

Layia chrysanthemoides – Smooth tidy tips. Somewhat succulent low leaves are glossy green; cheery spring flowers are good sized, abundant and yellow with white tips. Annual.

Layia chrysanthemoides—**half size**— This seed was received as an aberrant form of *L. chrysanthemoides*. It is very similar in form and flower, but it is half the size in every way, with pure yellow abundant flowers. Annual, great in containers.

Layia gaillardiioides – Woodland layia. Perfumed tarweed ends the spring season with bright yellow daisies held on slender stems with a wonderful tangy aroma. Easy annual in sun or part shade.

Layia glandulosa - **creamy yellow** - Palest yellow daisies in spring on branched slender stems create a great effect in spring. Aromatic leaves. Spring bloom is profuse, annual.

Layia hieracioides -- Tall layia or hawkweeek layia can reach 3' high and bloom for months with some supplemental spring water. Yellow flowers are held on somewhat glandular stems.

Layia pentachaeta ssp. albida -- White Sierra tidy tips—the common name says it all. Bright white daisies on wiry stems; aromatic leaves and lots of flowers in spring.

Leptosiphon ciliatus -- This annual deserves a better common name than whisker brush. Dense fat prickly heads show off their bright pink flowers held among white ciliate bracts. Spring bloom.

Leptosiphon "dylanae" – Either a subspecies of *Leptosiphon grandiflorus* or a distinct species, dense heads (over an inch across) of dark lavender flowers are held on 12" stems. From Santa Cruz County. Annual, easy.

Leptosiphon parviflorus – from Boulder Creek. Seed offered is from a very distinctive population championed by Santa Cruz naturalist Randy Morgan. Corolla limbs are golden-orange, with a pair of red dots at the base of each lobe. Corolla tubes are very long--up to almost 2 inches. Typically, flower color in *L. parviflorus* is highly variable, with yellow, pink, and/or white corolla variants, often within a single population. This rare entity is fairly uniform in color throughout its very localized population. It appears to have close affinities to the equally rare coastal species *Leptosiphon croceus*.

Lessingia leptoclada – Sierra lessingia brightens the garden in summer. Wiry erect stems can reach 2' or more and carry bright lavender flowers at their tips. Showy in bloom and easy to grow. 30 seeds

Lessingia pectinata var. *tenuipes* – Another late summer bloomer, this wiry annual can reach 2' with many interlaced stems. Individual flowers are bright yellow with red-brown banding in the throat. Wonderfully aromatic.

Limnanthes douglasii ssp. *nivea* - Meadow foam. Easy annual, and it does well in winter wet soil. Pure white flowers in spring appear in abundance, before the plant disappears for the summer, to reappear with fall rains.

Limnanthes douglasii ssp. *rosea* – Charming variant of meadow foam puts out bright white flowers with pink veins that age to pale pink. Spring bloom, well adapted to wet soils—and containers.

Lotus formosissimus (*Hosackia gracilis*)- From seasonally moist meadows, harlequin lotus forms a flat perennial mat to 2' across, with bright yellow and pink pea flowers in spring, and scattered bloom in summer. Z8?

Lupinus albifrons – This widespread species is found in many plant communities. Leaves are silvery; flower stems with reddish to blue purple flowers wreath 2-3' shrubs in spring and early summer. 30 seeds

Lupinus benthamii -- Spider lupine has very narrow leaves and can reach 30" in height. Bright blue flowers are vivid. Annual. 50 seeds

Lupinus bicolor –Annual lupine displays an abundance of small, very bright blue flowers in spring. Only 12" tall, but a patch of flowers creates quite a nice, sparkling effect. 50 seeds

Lupinus concinnus –Cute little bajada lupine creates white furry foliage mounds to 8" and decorates them with spikes of smallish bright blue purple flowers in spring. Annual. 30 seeds

Lupinus hirsutissimus - The common name of stinging lupine for this annual does not begin to illustrate the charms of this plant. Covered with stiff hairs, it bristles with enthusiasm. Red violet flowers in spring. 30 seeds

Lupinus luteolus – The erect stems of the annual butter lupine take on a candelabra effect as they branch. Spikes of soft yellow flowers develop grey to blue tones as they mature. Late spring bloom. 30 seeds

Lupinus microcarpus var *densiflorus* –**dark pink** -- Original collection from Siskiyou County, this variety of chick lupine has bright rose pink flowers on arching stems in spring. 50 seeds

Lupinus microcarpus var *microcarpus* –**lavender blue**– Seed from a local race of chick lupine has lavender blue flowers; furry flower spikes held over low green leaves. 50 seeds

Lupinus microcarpus var *microcarpus*—**red violet** – Chick lupine. Bright red violet to purple flowers are carried in spikes over low green leaves on this spring blooming annual. Low leaves, nice show. 30 seeds

Lupinus microcarpus var *microcarpus*—**near white** – Dense furry pinkish white flowers over low leaves. 50 seeds

Lupinus nanus – Valley sky lupine. Annual with bright blue flowers grows to 15", and paints hillside blue in spring. Sweet "moth ball" flower fragrance is just another intriguing smell from California grasslands. 50 seeds

Lupinus nanus '**Pacific Pink**'- Soft pink flowered seed strain of valley sky lupine. Developed from a chance find of pink flowered plants. Annual. 50 seeds

Lupinus polyphyllus var *burkei* – Perennial wet-growing lupine from higher elevations in the Sierra is dormant in winter, with spikes of bright lavender blue fls held over lush green leaves in summer. 20 seeds

Lupinus stiversii -- Harlequin lupine grows mostly in the Sierra foothills, though there are also populations in Monterey County. Very pretty flowers combine yellow banners with rose pink wings. Annual. 30 seeds

Lupinus succulentus '**Rodeo Rose**' -- Typical *L. succulentus* has blue purple flowers. This very pretty seed strain of arroyo lupine displays soft rose pink flower spikes in spring and early summer. Roger Raiche selection. Annual. 30 seeds

Lupinus variicolor – Perennial lupine from the immediate coast stays low. Spikes of blue and white flowers are striking in spring and summer. 30 seeds

Madia elegans - Annual. Young rosettes are soft-hairy; by midsummer they can elongate from 3-7' and short branches carrying many 1.5" miniature sunflowers explode with color. Aromatic foliage.

Madia gracilis – Annual. Grassy tarweed has slender stems, softly furry green leaves with a great aroma and many soft small yellow daisy flowers to feed spring insects and butterflies. Adaptable and floriferous.

Malacothrix coulteri – Snake's head can reach at least 2' when conditions are good. Papery buds have dark stripes on each pale phyllary, then open to showy yellow centered, white chicory-style flowers. Annual. Easy.

Malacothrix floccifera – Petite annual makes clouds of 1.5-2 cm yellow to white flowers in late spring and early summer. Little white furry tufts perch on the leaves when they are young. Can reach 12" high by 18" wide. Great for containers.

Mentzelia crocea—Sierra blazingstar is a great name for this annual. Stems reach to 30" and carry an abundance of shiny yellow flowers with prominent stamens.

Microseris sylvatica – Perennial from dry slopes makes substantial clumps in time. Yellow chicory style flowers on long bare stems to 2' appear in spring followed by the typical puff seed heads. 30 seeds

Mimulus—shrubby species –see ***Diplacus***.

Mimulus (Erythranthe) guttatus -low form - see ***Erythranthe***.

Mimulus (Diplacus) pictus –see ***Diplacus***.

Monardella douglasii – Slender annual with a minty fragrance has erect stems that are topped by translucent bracts under red purple flowers. From dry habitats, and needs good air circulation. 30 seeds

Monolopia stricta –Small yellow daisy flowers are held in frothy abundance over smooth gray leaves on this charming small stature spring blooming annual from the dry interior parts of California.

Nemophila menziesii 'Frosty Blue' – Typical baby blue eyes has those incredible baby blue flowers in spring set among green leaves with silver spots. This seed strain produces many plants with all silver leaves as well as the typical silver spotted ones. Annual, and shows up well in the shade.

Oenothera elata ssp. hirsutissima – Biennial can reach over 6' high in moist gardens. Vibrant yellow flowers to 3" across climb up the stems as the summer progresses. Easy to grow. Birds love the seeds.

Papaver (Stylomecon) heterophylla - Wind poppy. Glorious 2" orange flowers on thin stems can have maroon centers. Best with good drainage. Annual. Will be sent with "Super Smoke Plus" to aid germination.

Perideridia kelloggii – Yampah. Slender perennial with divided leaves puts up flower stems to 3' which carry umbels of small white flowers that feed butterflies. Larval host for anise swallowtail. Blooms in midsummer. 30 seeds

Phacelia bolanderi - Light lilac blue flowers are held on spreading stems over softly hairy, gray green leaves. Effect is subtle, but very pleasing. Good perennial plant for dry shade. Z8

Phacelia californica - Attractive perennial foliage clumps are a purplish gray green. Full flower heads are an especially bright lavender and are held over the foliage on erect stems in spring. Z8

Phacelia ciliata – This bright lavender blue annual phacelia creates those "blue lakes" in the Carrizo Plain area in spring during generous rainfall years. Flowers are held over lobed, soft grey-green leaves.

Phacelia distans – Creamy flowers with delicate brown veining are abundant on this widespread California annual. It is much appreciated by all sorts of bees and flying creatures. 100+ seeds

Phacelia parryi –Annual to 2', with purple flowers on a coiled inflorescence that unfurls as spring moves on. Most phacelias are attractive to beneficial insects.

Pholistoma auritum – Clambering annual has widely lobed green leaves with silvery spotting, and large lavender blue flowers with white then dark centers. Showy annual for dry shade. Can be difficult to germinate.

Plantago erecta -- Found throughout California, foothill plantain can be quite abundant in spring. Leaves are narrow and short stems hold the translucent "bobblehead" flowers. Host species for checkerspot butterflies.

Pseudognaphalium californicum -- Snowy white papery flowers in full heads have an intriguing maple-ish aroma. Annual to perennial. Green leaves, upright stems, dust-like seeds. Spring to summer bloom. Great dried flower. 100+ seed

Pseudognaphalium ramosissimum – Pink everlasting has small pinkish flowers on erect stems that are 4' or more. Wonderfully aromatic green leaves, summer bloom. Not showy, but it smells so good. 100+ seed

Romanzoffia californica - Mist maidens. Low clumps of shiny lobed leaves are absolutely covered with dainty white flowers in spring. Dies down to tubers in summer and fall and must be kept dry. Easy in containers, with profuse bloom in spring from fall sowing. Z7

Salvia apiana –White sage. Subshrub makes 2-3' mounds of broad white, highly aromatic leaves. Flower stems to 6'+ carry white to pinkish white flowers in spring. 30 seeds

Salvia carduacea - Pale lavender blue flowers with an incredibly frilly lower lip are borne in spiny, cobwebby heads. Annual, good in containers. 30 seeds

Salvia clevelandii hybrids – Seed was collected from *Salvia clevelandii* 'Winnifred Gilman' grown in the presence of other California species and they are known to cross freely. Parent has aromatic leaves, bright blue fls. 50 seeds

Salvia spathacea - This matting perennial has the sweetest smelling large rough green leaves; pitcher sage produces thick spikes of dark pink flowers in spring and early summer. Z8 30 seeds

Salvia spathacea –from yellow flowered plant. Habit, sweet smell and culture all the same as for the typical dark pink form. Seedlings have been about 30% all yellow, with others variable—lighter pink, pink and yellow, etc. 30 seeds

Scrophularia californica - chartreuse fl. The typical figwort has small dark red flowers; this seed strain has the same small flowers but they are almost always striking yellow green. Perennial, to 5'+. Z7 100+ seeds

Silene laciniata ssp. *laciniata* – Cardinal catchfly makes a real show in spring and summer when its display of bright red flowers can seem endless. Hummingbirds love it. Perennial, erect stems to 2'.

Stephanomeria cichoriacea – Perennial rock lettuce (or wire lettuce) sends up almost leafless stems to 3' with many bright pink chicory style flowers in mid to late summer. 20 seeds

Stephanomeria virgata - Unassuming rosettes give rise to many thin stalks with bright, light pink chicory-like flowers in summer and fall. Butterflies like it too. Annual, can reach 4-5' in a good situation.

Stipa (Nassella) lepida – Foothill needlegrass. Similar to *N. cernua*, but a little smaller with shorter awns. Graceful flower sprays are silky blond, over fine textured low foliage. Looks great on banks or backlit. Z8

Stipa (Nassella) pulchra – Purple needlegrass is found in many habitats in California. This perennial bunchgrass puts up graceful flowers stems in spring, with long shiny awns. Z7

Streptanthus farnsworthianus - Startling shiny red violet to navy blue bracts are up to 4" long and 2" wide on this spring annual. Small flowers are white. To 18" tall. Easy to grow.

Streptanthus glandulosus ssp. *glandulosus (albidus ssp. peramoenus)* - An uncommon annual with bright mauve-purple inflated flowers on slender stems. Easy.

Streptanthus glandulosus ssp. *secundus* - Little white pouch flowers set along thin stems are pretty in mass on this easy spring annual. To 12-18".

Thysanocarpus curvipes –The true *T. curvipes* is a slender spring annual that shines when small, quite ornamental round seeds are backlit by sun. Bloom is in early spring, actual flowers are white and small.

Thysanocarpus radians – Previously misidentified as *T. curvipes*. Lacepod is a spring annual with unshowy small white flowers, but elegant and well displayed fruits. Dangling round seeds display a network of veins to the edges of the "pod", and are subtly colored pink and green and cream as they mature. 30 seeds

Trifolium fucatum - Bull clover. A very nice annual from wet meadows, lush green leaves often have interesting brown and silver markings. Large flower heads start out creamy white and age to a light rosy pink.

Trifolium fucatum—cub clover - Affectionately called “cub clover” because it is a junior form or undescribed subspecies of *T. fucatum*, this annual has lush green leaves with brown speckles and round greenish yellow flower heads that age rose. Grows on grassy slopes and in meadows.

Trifolium grayi – This species has few markings on its rich green, lush leaves. Heads of flowers are a dark lavender purple and are abundant in spring.

Trifolium jokerstii – Uncommon clover with vivid golden yellow flowers is from vernal pool habitats. Easy to grow, blooms are abundant in spring to early summer. 30 seeds

Trifolium obtusiflorum – Creek or clammy clover makes spreading lush mats of green leaves and produces purplish pink and white flowers for a long time if soil is moist. Annual.

Trifolium phaeocephalum Greene - Flowers are darkest purple and white on this species; and can appear for a long time if season is mild. Interesting markings on the lush leaves. Classified in Jepson under *T. variegatum*.

Trifolium willdenovii - Tomcat clover. Thin leaves and many rich purple and white flowers on rounded heads. Some seedlings have burgundy leaves. Annual. Good on heavy soils.

Zeltnera (Centaurium) davyi -- Shiny pink flowers with distinctive white centers appear in late spring and summer on this annual from coastal California. Larger flowers than *C. muehlenbergii*. 200+ seeds

Zeltnera (Centaurium) muehlenbergii – Slender annual carries heads of silky clear pink flowers in spring and summer. Beautiful in a mass, or a meadow. 200+ seeds

SALVIAS

Packets from this list are \$4.00 each. Zones stated correspond to USDA climate zones.

Salvia apiana – California. White sage. Subshrub makes 2-3' mounds of broad white, highly aromatic leaves. Flower stems to 6'+ carry white to pinkish white flowers in spring. 30 seeds

Salvia barrelieri - SW.Spain, N.Africa. Strong basal rosettes are somewhat blue gray; very ornamental flower stalks to 5' rise in late spring and carry many large lavender blue flowers for a long period. Perennial. Z8 ? 30 seeds

Salvia broussonetii - Canary Islands. Large light green leaves densely held on a rounded perennial shrub are very attractive set among other garden plants on this white flowered sage. To 30". Z9 30 seeds

Salvia carduacea - Pale lavender blue flowers with an incredibly frilly lower lip are borne in spiny, cobwebby heads. Annual, good in containers. 30 seeds

Salvia clevelandii hybrids – Seed was collected from *Salvia clevelandii* 'Winnifred Gilman' grown in the presence of other California species and they are known to cross freely. Parent has aromatic leaves, bright blue fls. 50 seeds

Salvia desoleana - Sardinia. Wide light green leaves have undulating edges and make a tight clump to 2'. Pale cream and light blue flowers are carried on 18" stems in spring and summer. Wonderfully pungent leaf aroma. 30 seeds

pikes of dark blue flowers are abundant spring to fall. Vigorous and impressive, but tender to hard frost. 30 seeds

Salvia disermas—pink flower – South Africa. Durable, attractive shrub produces spikes of pink flowers among dusty gray green leaves in spring and summer. 30 seeds

Salvia namaensis – southern Africa. Twiggy light shrub to 5' has a distinctive "medicinal" aroma and small pale blue flowers. Botanists call the light green leaves "lyrate pinnatifid" and they *are* quite attractive. No hard frost. 30 seeds

Salvia spathacea - This matting perennial has the sweetest smelling large rough green leaves; pitcher sage produces thick spikes of dark pink flowers in spring and early summer. Z8 30 seeds

Salvia spathacea –from yellow flowered plant. Habit, sweet smell and culture all the same as for the typical dark pink form. Seedlings have been about 30% all yellow, with others variable—lighter pink, pink and yellow, etc. 30 seeds

Salvia splendens – pink fl. – Brazil. Majestic shrubs to 5'+ bloom all summer into fall with spikes of light peachy pink flowers set in peach calyces among lush green leaves. Backlit flowers are translucent and honeybees have been observed entering the flowers and sipping nectar, with extended tongues! Easy in a watered shady spot. Tender to frost. 30 seeds

Salvia subrotunda – Brazil, Paraguay, Argentina. Small vivid orange flowers are in perfect contrast to green stems and leaves on this 4' bushy shrub. Blooms from spring to frost, and is especially attractive to hummingbirds. 30 seeds

Salvia taraxacifolia - Morocco. Gray, sweet-smelling rosettes look like dandelions when they are young; spikes of palest pink flowers appear late spring to fall. Very nice combined with red-violet flowers. Perennial, to 18". Z9 30 seeds

OTHER SEEDS

Packets from this list are \$4.00 each. Zones stated correspond to USDA climate zones. Packet size is at least **50 seeds**, unless otherwise specified.

Anigozanthos flavidus - Australia. Erect iris-like clumps of leaves to 30"; dark stems to 5'+ bear fuzzy burnt orange flowers on this selection of kangaroo paw. Seedlings may be variable, but there are no other colors nearby. Z9

Beschorneria yuccoides - Mexico. Statuesque perennial is like a yucca, but with soft leaves and no spines. Wide blue-gray leaves form rosette to 3'; showy rose pink fl. spike has narrow green/pink flowers. Z9 30 seeds

Clarkia tenella – lavender purple -- The South American clarkias seem to be longer blooming than our gorgeous California species. This upright annual displays silky lavender purple flowers for months.

Clarkia tenella - maroon flower – South America. Annual. Most likely a subspecies of *C. tenella*. Small, bright maroon flowers are abundant on low, spreading plants. Long bloom.

Dahlia coccinea hybrids – orange and gold - Mexico. Masses of single, bright orange to gold flowers in many shades are carried on bushy plants that can reach 6' from late spring through fall. Bloom within three months of sowing.

Ferula sp. - Mediterranean. This may be *F. assa-foetida*, but is also generally known as *F. communis* 'Gigantea'. Ferny leaves form a substantial 18" mound of arching, lacy foliage. Flower stalks rise to 6' in early spring and carry dense globes of yellow flowers. Will die down in summer dry climates and reappear with fall rains. Z8? 30 seeds

Freesia alba - Iridaceae, S. Africa. Easy from seed, this bulb (actually a corm) grows in winter/spring and is dormant in summer. Late spring flowers are clear white with a purplish flush on the petal backs. Very nicely fragrant too. 30 seeds

Gladiolus flanaganii - The famous (infamous?) suicide glad produces 2" rich blood red flowers with white linear markings in the throat on arching spikes above green foliage. So named because it is usually seen from a distance in inaccessible locations midway along steep waterfalls and cliffs high in the Drakensberg of Eastern S. Africa. Summer growing. Easy to germinate and grow. Z8 30 seeds

Heliophila coronopifolia - South Africa. This showy annual makes many thin spikes with clear blue round flowers for a long season, spring and summer. Easy, rewarding and just pretty. 100 seeds

Lepechinia hastata - Mexico. Large, arrow-shaped gray leaves are held on stiffly upright stems, red purple flowers in terminal spikes are showy in summer and fall. Grows 4-6' high. Adaptable. Z8

Leucadendron tinctum – South Africa. Sturdy shrub to 5' has wide blue-green leaves and bears male and female flowers on separate plants. Bloom is in February with rosy and creamy yellow bracts and flowers have a fruity aroma. Summer new growth is flushed pink. Hand pollinated seed. Super Smoke Plus sent with packet of 15 seeds

Melanoselinum decipiens - Madeira. Also known as black parsley. Lush monocarpic perennial makes a strong trunk to 6' to bear its large, tropical-looking leaves. Dense umbels of pinkish white fls. cover the leaves in the blooming year, seeds that follow are black. Can take drought in shade. Z9

Melianthus major - South Africa. Grown primarily for its large lush, blue gray foliage, the tall spikes of maroon flowers in spring are an added bonus. Z9 30 seeds

Mirabilis longiflora - Texas, Mexico. Long stems have clusters of white flowers at their tips. The effect is very airy, as the flower tubes are 5" long, and the exotically scented, rose-centered white flowers open only at night, and all point in different directions. Not for the meticulously manicured garden, but well worth growing! Perennial. Z8 30 seeds

Nicotiana 'Priscilla' -- Garden hybrid, to 5'. Huge night fragrant white flowers have 2" faces and 2.5" tubes.

Wattakaka (Dregea) sinensis - China. This climbing milkweed displays rounded heads of fragrant starry whitish-pink flowers in summer. Deciduous in winter. Leaves usually variegated in this seed strain. Z9 or less 30 seeds

RESTIOS

Packets from this list are \$4.50 each. Zones stated correspond to USDA climate zones.

Restios -- or the species offered here-- are plants that appreciate acid soils of low fertility. Best germination comes when seeds are treated with "super smoke plus" prior to planting, and when they experience a marked difference (30 degrees F. is ideal) between day and night temperatures after they are sown. Best in soils low in phosphorus. All restios offered here are from South Africa. **Seed pkts. are 50 + seeds** unless stated otherwise. **Price per packet is \$4.50** and includes "super smoke plus" to aid germination.

Cannomois grandis –smaller seed This giant bamboo like clumper makes thick culms often pink to red in color when they are new. Can reach 10'. The very large seeds of this species have been difficult to germinate even after treatment with 'instant smoke', 10 % germination typical. Previously called *Cannomois virgata*. No damage at 20 degrees F. 50 seeds

Chondropetalum (now Elegia) tectorum –Smaller scale than *Chondropetalum elephantinum*, tidy clumps reach 3-4', with a narrower base and very dark green culms. The same chestnut bracts reveal gold undersides as they peel from the stems. Graceful, adaptable. No damage at 20 deg. F. 100+ seeds

Ischyrolepis (now *Restio*) *subverticillata* - One of the best species for cut foliage, even small portions of a stem have great symmetry and beauty. Can reach 6' high and densely clumping, this species will also thrive in part shade. Has bright green culms and darker branchlets, with the form of the branched horsetails (*Equisetum*), but much stiffer, and of course, not running. Some plants quite damaged at 20 degrees F., others were untouched.

Restio similis – Small clumping species to 18" makes draping, fine textured clumps. Fine dark green stems, with mostly unbranched culms, are tipped by shining bronze flowers in summer. Can grow in dry gardens.

Rhodocoma capensis - Tall, erect columns of branched "horsetail" dark green stems droop at their tips. Small flowers are golden and line the branch tips. This is very graceful in form and creates great contrast with all other plants. Clumps here are 6'+ at present and are a visual treat in the garden. Untouched at 20 degrees F. 100+ seeds

Thamnochortus insignis - Forms a hemispherical kinetic sculpture in time with its slender dark green stems moving with the slightest breeze. Stems can be 5' in length and rise from all points of the dense basal clump. Golden flowers tip these branches. Can reseed in a limited way in the garden. Good container plant. No damage at 20 degrees F. 100+ seeds

Thamnochortus spicigerus – Tall species to 6' seems to keep a narrower profile than other species grown so far. Stems are smooth and leafless and dark gray green; shiny bronze flowers are typical form. Seems drought and cold hardy. 100+ seeds

Ordering information

Most seed packets are \$4.00 each. Restio seeds are \$4.50 per packet.

There is no minimum order. Please send payment by check payable to Seedhunt or use paypal. **Paypal** link is at the Order page of the website, or pay to seedhunt@cruzio.com. For those without Paypal accounts, a Paypal invoice can be sent upon request—Paypal account is not needed to pay the invoice by credit card.

Shipping and handling charge is \$5.00 for US orders. Shipping charge for orders to Canada is \$15. Shipping for all other international orders is \$20. California residents please add **9% sales tax** or include a signed resale certificate. Phytosanitary certificates needed for seed orders to the EU cannot be provided.

Inquiries and orders can be received by e-mail to **seedhunt@cruzio.com**.

Orders will be filled as they are received.

Orders can be sent by email to seedhunt@cruzio.com or by postal mail to: Seedhunt, P.O. Box 96, Freedom, CA 95019-0096 USA.
